

Get the real value out of Personal Data

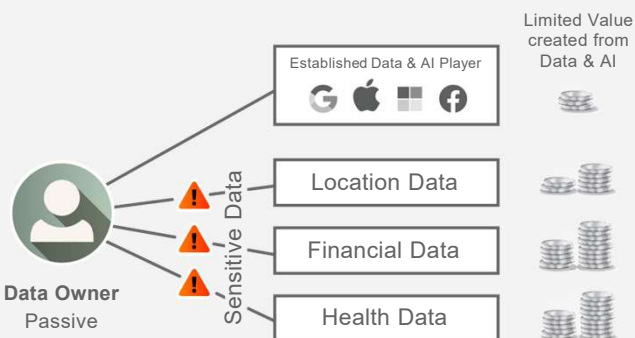

By providing a platform where everyone can decide how they want to use their data - from safe and private storage, secure trading with interested parties to personalized and predictive AI - Dwinity opens a world of possibilities when dealing with personal data.

HIGHLIGHTS

- ✓ Today's big data and AI approaches will not effectively address the big societal issues due to lack of data.
 Example: to cure and predict cancer, existing Vertical AI use cases will not be grounded on enough data.
- ✓ It needs a safe, trustless and decentral approach, so that the majority of the population can contribute their most valuable personal data to the common good (or to paid research).
- ✓ Dwinity's ecosystem will establish a highly scalable business, reaching 6.5 MN plus end users within 36 months and achieving an ARR of 180 USD MN after three years of business operation.
- ✓ Today Dwinity is a proud partner of NVIDIA, Nillion, Avalanche and STORJ.

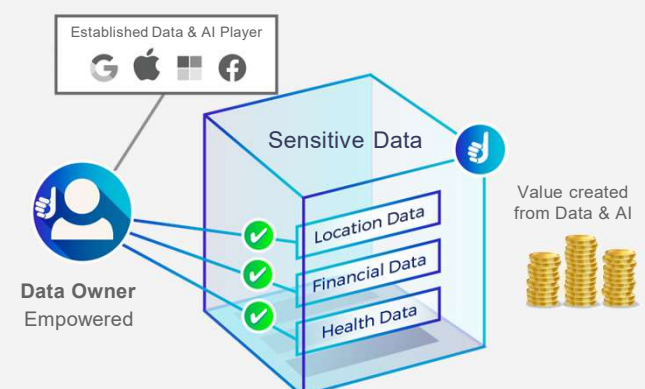

Current dysfunctional centralized Data System with huge potential

The present centralized data management and AI services are limited: users have concerns to share Sensitive Personal Data. Thus, the AI models are restricted to an insufficient data pool and cannot deliver outstanding insights and value.

Decentralized Web3 Data Ecosystem empowering data owners and users

Dwinity's decentralized data storage service and decentralized AI allow users to melt all personal and meta data in a full user-controlled space. The largest possible data set can be fed into user's pocket AI to generate optimal results and value.

Dwinity's ecosystem takes the Data Economy to the next level

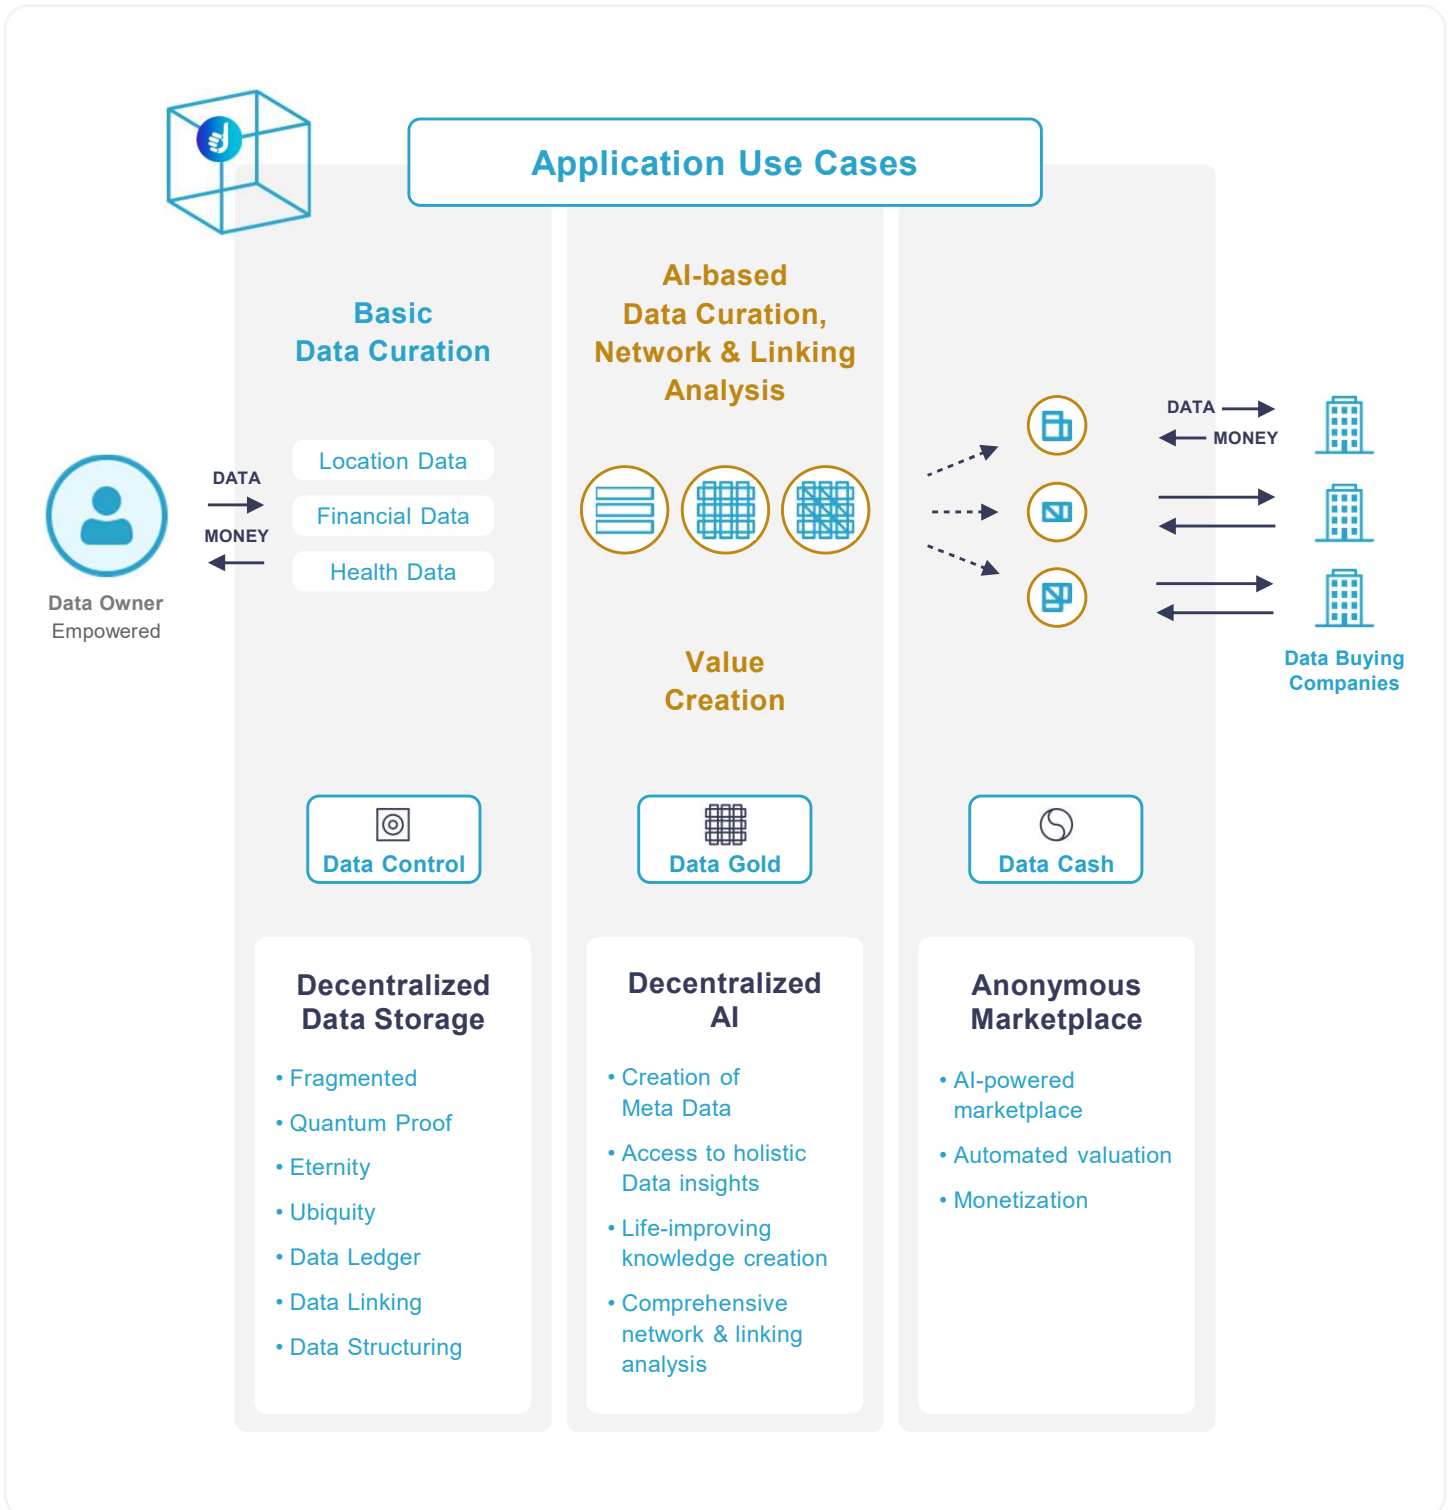

Dwinity's mission is to give power back to Data Owners and create a thriving Data Economy where informational asymmetries are finally removed.

Dwinity creates a full-fledged and data ownership-driven ecosystem for storage, analysis, exchange, and commercialization of Sensitive Personal Data.

Dwinity unlocks unseen value potential for everyone involved in the global Data Economy.

Dwinity will flourish from license fees by offering software and analysis-as-a-service.

Dwinity will also benefit from commission on transactions in the data marketplace.

Dwinity's powerful components address the demands of today's market

Today's Problems

- × Local storage
- × Lack of security
- × Lack of trust

- × Limited availability of high value data
- × Silo and patchwork data
- × Low degree of knowledge building
- × AI only accessible via monopoly players

- × No motivation or direct rewards
- × Dominance of intermediaries
- × Major part of data value not captured

Dwinity Solutions

Data Control

- ✓ Storage User-controlled
- ✓ Security
- ✓ Trust

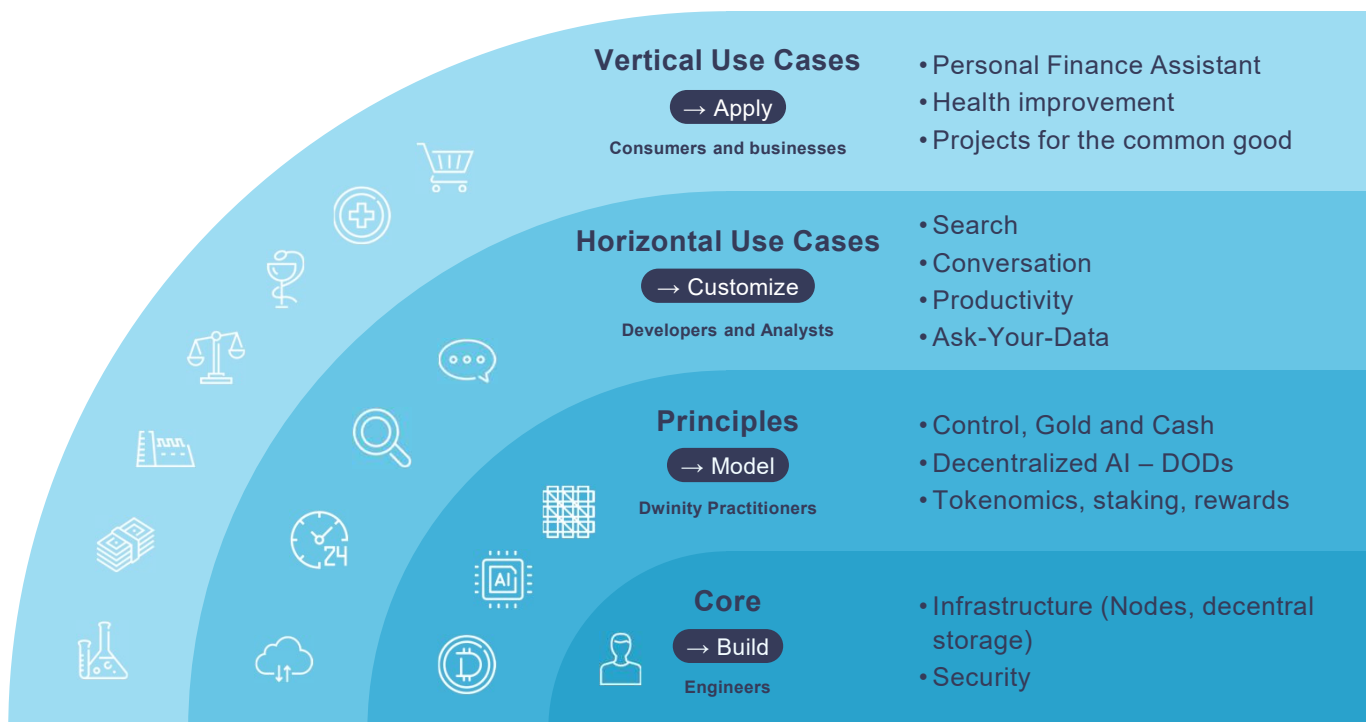

Data Gold

- ✓ Access to a holistic data view
- ✓ Comprehensive network&linking analysis
- ✓ Life-improving knowledge creation and full benefits of AI

Data Cash

- ✓ Monetary rewards for Data Owners
- ✓ High gamification incentive
- ✓ Fair, transparent and trustful data market

Dwinity lays the foundation for a flywheel driven ecosystem

Sovereignty

- No rug pulls – No central entity can access or censor your data or influence your access
- You have control over which data is revocably shared with whom and to what extent

Eternity

- Storage of your social capital
- Consolidate your data heritage, also for your successors
- 100% GDPR compliant
